

# TeleClix™ LiveExpress

A high performing authoring tool

**LiveExpress** is an authoring tool, both for static and time-based contents. Consequently, time **synchronous** data, for example football data can be processed. Naturally, the **LiveExpress** can be easily combined with the LiveLink system of **TeleClix**. Thereby, the editing of the LiveLink data is made feasible.

From various import formats such as **SVG**, SMIL, Flash, SWF and MS PowerPoint, **MHP** (Multimedia Home Platform) applications can be created.

**SVG2MHP** enables the automatic **conversion** of the XML-based markup language SVG. The **unique** feature is

that no intermediate steps must be undertaken by the developer. In addition, the programme **SVG2MHP** can be configured in a straightforward way.

**SVG** is especially interesting for MHP applications as the **graphic elements** can be scaled

discretionarily without any losses of quality.

**SWF2MHP** also allows an automatic conversion to MHP. **SWF** is a binary graphic format that is used mainly by **advertising agencies**.

The substantial product

**LiveExpress** offers great user friendliness, whereby it guarantees at the same time a straightforward implementation. A further performance feature is its **fast** conversion rate.

Convince yourself from the **versatile** features of LiveExpress!
